

Saris™

Hakea salicifolia 'HAL01' 

- Much more compact
- Tidier than the common form
- A tough, reliable shrub

Hakea salicifolia is known for its toughness, but is also considered to get untidy as it gets older. Once established, they are one of the most hardy of plants. They withstand long periods of drought and moderately wet conditions, as well as cold and windy positions. They are highly frost tolerant. It can tolerate some salt spray and is also a fire retarder. Another great thing about Hakea salicifolia is that they are normally pest free, probably because of their tough resilient foliage and stems.

One of the most hardy plants

The only reason they have not been more widely used is that they become untidy. Saris solves this problem. Hakea salicifolia is native to NSW and Queensland, but it grows well in other regions. In Victoria some councils have it listed as somewhat invasive, but Saris so far after 6 years has never seeded, so Saris is a safer option.

SHRUBS & GROUND COVERS

DESCRIPTION	Tough, hardy compact Hakea
HEIGHT & WIDTH	2m x 1m
POSITION	Full sun to part shade
CARE	Trim and shape as required
USES	Compact, tidy landscape or garden plant
SOIL TYPE	Sandy to heavy clay soils
